

### Complex Project Requests & Details Needed

To ensure equipment or furniture is installed correctly and appropriately; that all of its connections are proper and compliant, and that during an earthquake it doesn't fall off of its "feet" and tip over or worse, fall onto its rollers and move around the room, or through a wall and down the stairs.

- Field verification that there is room within the space
- Field verification there are proper clearances,
- Verify use of the equipment and maintenance of the equipment
- Verify utility/gas/exhaust connections
- Verify if FS will install and make connections
- Verify seismic or structural hold downs
- Verify any EH&S issues

An assigned Project Manager is required to coordinate all of the moving parts to efficiently accomplish the project.
